

Barbershop Operations Analytics

Business performance case study | Power BI-style portfolio

From operational data to management insights

September 2025 – August 2026

Portfolio project | Simulated / anonymized data

Executive Summary

Metric	Value
Total Revenue	\$344,656
Total Clients	9,557
Average Ticket	\$36.06
Avg Clients / Open Day	30.5

Revenue remains relatively stable across the 12-month period. Average ticket stays close to \$36. Full Service contributes the largest revenue among the tracked services. All financial figures and names are simulated/anonymized.

Revenue Trend

- 12-month revenue totals \$344,656.
- Highest monthly revenue: \$29,835.
- Lowest monthly revenue: \$27,106.
- Monthly variation is present but does not show a dramatic structural break.

Client Volume

- Total recorded visits: 9,557.
- Average ticket: \$36.06.
- Average clients per open day: 30.5.
- Client volume follows a broadly stable monthly pattern with normal fluctuations.

Service Mix & Revenue

Service	Clients	Revenue	Avg ticket
Full Service	2,882	\$133,712	\$46.40
Haircut	3,425	\$105,930	\$30.93
Short Full Service	2,081	\$80,153	\$38.52
Beard	1,169	\$24,861	\$21.27

Barber Performance

Barber	Clients	Revenue	Avg ticket
Barber A	3,798	\$141,208	\$37.18
Barber B	3,187	\$119,720	\$37.57
Barber D	1,522	\$56,746	\$37.28
Barber C	1,050	\$26,982	\$25.70

Management Insights

- Monitor service mix: revenue is concentrated in higher-ticket Full Service and Short Full Service offerings.
- Use barber-level revenue and client volume together to understand workload and productivity.
- Track monthly demand against available capacity to identify underused or overloaded time windows.
- Use Power BI slicers for date, barber, service and day-of-week to move from headline KPIs to operational diagnosis.
- The next analytical layer should connect demand, capacity and staffing decisions.

Data & Methodology

- Period: September 2025 – August 2026.
- Currency: USD.
- Data: simulated and anonymized for portfolio publication.
- Core entities: transactions, capacity, barbers, services, dates.
- Power BI model concept: star-style analytical model with DAX measures for revenue, clients, average ticket, capacity utilization and period-over-period change.
- Purpose: demonstrate business analysis, dashboarding and decision-support skills.
